

Ian Qiu

Professional Profile

Experienced Software Engineer with 7+ years of experience delivering scalable web and cloud-based solutions across eCommerce, SaaS, and public-sector projects. Strong full-stack background in TypeScript, React, Next.js, Angular, Node.js, C#, .NET Core, PHP, RESTful APIs and GraphQL, with hands-on experience in Azure, AWS, Vercel, SQL Server, PostgreSQL, MySQL, and CI/CD pipelines using GitHub Actions, Azure DevOps and GitLab CI to automate build, testing and deployment workflows.

Skilled in translating high-level business ideas into practical technical solutions, particularly when working with non-technical stakeholders. Recognised for strong ownership, clear communication, cross-functional collaboration and the ability to deliver high-performance, user-focused products in agile environments.

Passionate about AI-driven innovation, cloud-native architecture and building future-ready digital solutions that balance technical quality with real business impact.

Recently strengthened practical AI engineering capability through hands-on projects using vector embeddings, RAG architecture, LangChain, Bun and prompt engineering, with a focus on building production-style chatbot and retrieval-based applications.

Experience

Full Stack Developer Munro Footwear Group

Jan 2025 – Feb 2026

Key Responsibilities:

- **Full-stack e-commerce development:** Delivered a high-performance **Next.js + React (v19)** front end with a headless **Adobe Commerce (Magento) + MySQL** platform as part of MFG's **microservices** ecosystem.
- **Stakeholder communication:** Collaborated with non-technical stakeholders to clarify high-level business ideas, translate requirements into feasible technical solutions, and communicate technical trade-offs clearly.
- **Agile Delivery & Cross-Functional Collaboration:** Worked closely with designers, product owners, QA, and cloud engineers to deliver features iteratively within agile sprints. Managed tasks, bugs, and release cycles using Jira with a strong focus on value-driven delivery.
- **CI/CD pipeline optimisation:** Supported and improved GitHub Actions workflows for automated build, testing and deployment of Next.js / React applications, helping improve release reliability, reduce manual deployment effort and maintain consistent delivery across multiple eCommerce brands.
- **Third-party system integration:** Integrated external services and third-party APIs, including checkout, delivery, payment, product and marketing-related systems, into the headless eCommerce platform to support seamless customer and operational workflows.
- **AI-powered product recommendation plugin:** Built an AI-assisted shoe recommendation plugin that converted CMS content into vector embeddings, enabling semantic search and personalised shoe suggestions based on occasion, function and customer needs.
- **AI-Assisted Engineering Workflow:** Used ChatGPT, GitHub Copilot and Claude Code to support legacy code analysis, refactoring, debugging and implementation planning. Applied

Claude Code to review code structure, explore safer refactor options and improve development velocity while maintaining code quality.

► Key Achievements:

Main Developer – Midas Shoes Migration

- **Led the migration** of the Midas Shoes eCommerce platform from Classic Magento to a Headless CMS + Next.js stack, achieving **40% faster load times** and improved SEO rankings (**Lighthouse Score**).
- Engineered integrations between **Magento, AWS Lambda**, and legacy ERP systems for **real-time data synchronisation** and scalable performance.
- Delivered the platform **on time and within scope**, enhancing site stability, maintainability, and user experience across all touchpoints.

Express Checkout

- Implemented Express Checkout across **both product and cart pages** within the Magento–Next.js ecosystem, demonstrating strong capability in integrating complex 3rd-party vendor solutions
- Ensured PCI-compliant, secure payment flows and delivered measurable UX improvements, reducing checkout time, lowering cart abandonment, and increasing overall conversion rates.

Australian Post Parcel Collection Integration

- Integrated Australia Post's Parcel Collection service into the Styletread eCommerce ecosystem, enabling customers to select convenient pickup locations during checkout. Built end-to-end functionality across both the Next.js frontend and Magento backend
- It is showcasing strong capability in delivering complex 3rd-party integrations and ensuring reliable data flow between UI, order management systems, and logistics APIs.

RM^{plc} **Software Engineer** RM PLC (LSE Listed- [Code: RM](#)) **Oct 2021 – Jan 2025**

Key Responsibilities:

- **Full-Stack SaaS Development:** Designed and delivered end-to-end solutions across **front-end, back-end, and database layers**, including API design, data processing, and UI/UX development with optimised PostgreSQL queries for performance and scalability.
- **Stakeholder communication:** Collaborated with non-technical international stakeholders to turn high-level assessment ideas into clear requirements, technical solutions and working product features.
- **System Migration & Architecture:** Contributed to the transformation of a PHP monolith into a modern microservices architecture, designing services in both C# .NET Core and Node.js and selecting the optimal runtime for each workload, from lightweight API endpoints to background processing tasks.
- **CI/CD pipeline optimisation:** Maintained and optimised Azure DevOps CI/CD pipelines for SaaS platform delivery, including automated build validation, unit test execution and deployment controls to improve release quality and reduce regression risks across development, staging and production environments.
- **Accessibility:** Ensured **WCAG 2.0–2.2** compliance for all the projects
- **AI-Assisted Engineering Workflow:** Used ChatGPT, GitHub Copilot and Claude Code to support legacy code analysis, debugging, refactoring and implementation planning across PHP, Angular, Node.js and .NET projects.
- **Mentorship:** Mentored junior developers in Angular, Node.js and coding best practices,

supporting code quality, knowledge sharing and stronger development across the team.

► Key Achievements:

Lead Developer - PISA2025 (Programme for International Student Assessment):

- Took ownership of the *PISA2025* assessment platform after the project lead's departure, ensuring stability and delivery continuity for the OECD-Europe international education program.
- Lead redevelopment and feature delivery under tight deadlines while managing stakeholder expectations and maintaining cross-regional communication.
- Collaborated closely with non-technical OECD stakeholders and academic assessment teams to translate high-level assessment concepts, prototypes and feedback into clear technical requirements, development tasks and working product features.
- Acted simultaneously as **Project Manager, Analyst, and Lead Developer**, collaborating with OECD clients to translate requirements into actionable development tasks. Led design, QA, and production delivery of **WCAG-compliant** modules built with **React.js**, **TypeScript**, **PHP**, **Chart.js**, and **Blockly**.
- Successfully delivered two major platform modules **on time and within scope**, improving system stability and usability for global researchers, while earning formal recognition from **OECD-Europe** for leadership, quality, and client collaboration.

Lead Angular & Node.js Modernization:

- **Spearheaded the upgrade of Angular (v14→18) and Node.js (v14→18)** for RM Australia's flagship **SaaS platform, Assessment Master**, modernising the tech stack for improved speed, scalability, and maintainability.
- **Cross-team dependency coordination:** Coordinated NPM dependency upgrades across multiple feature teams, identifying package compatibility risks, aligning upgrade timelines, resolving breaking changes, and ensuring a smooth transition with minimal disruption to active development.
- **Redesigned front-end architecture** with modular components and best practices, enhancing code reusability, accessibility, and long-term sustainability.
- **Contributed to system migration** from a PHP monolith to a **C# .NET Core microservices** framework with **Azure Functions** and **API Gateway**, enabling event-driven processing and cost-efficient scaling.
- **Mentored junior developers** in **Angular** and **Node.js**, strengthening code quality standards and fostering a culture of technical excellence across the team.

Test-Driven Development (TDD) Leadership:

- Implementing automated testing frameworks and coding standards that **cut defects by 40%** and **improved release reliability and team productivity**.

Algorithm Design - ICILS Machine Marking (International Education Project):

- Engineered a recursive algorithm to automate Blockly-based code evaluation for the ICILS international assessment, transforming manual review into a fully automated, scalable process.
- Drove Angular front-end modernisation, introducing modular architecture and reusable components that boosted performance and maintainability.
- Built data processing pipelines to auto-generate detailed scoring reports, cutting manual effort by over 70% and significantly improving assessment accuracy and turnaround time.

Lead D3.js Data Visualization Upgrade:

- **Led a full upgrade of D3.js (v4 → v7.9)** within the Assessment Master analytics platform, significantly improving **rendering speed, scalability, and interactive performance**.
- **Optimised data-visualisation pipelines** to handle large, complex educational datasets, reducing load times and improving responsiveness across dashboards.

- Delivered a **modern, insight-driven user experience**, empowering educators and researchers to interpret results more efficiently through advanced, dynamic visual analytics.

Web Developer Letour Cycles

Dec 2019 – Oct 2021

Key Responsibilities:

- E-Commerce Development:** Designed, developed, and deployed **Shopify** and **Neto** online stores, delivering enhanced functionality and user experience.
- API Integration & Automation:** Built and maintained seamless API connections for **order processing, tracking, and partner integrations** across **Shopify, eBay, Neto, and AusPost**, ensuring real-time data synchronisation.
- SEO & Data Management:** Implemented SEO-optimised product pages with dynamic metadata and monitored data flow across platforms to maintain accurate order and tracking information.

► Key Achievements:

Wholesale Integration System Development

- Built an **API-driven Node.js integration** linking partner systems with **Neto eCommerce**, automating order import and fulfilment.
- Launched wholesale operations from zero**, reducing manual processing by **80%** and enabling real-time order synchronisation across platforms.

Full Stack Developer Australian Trading Bridge

Jan 2018 – Dec 2019

Key Responsibilities:

- System Development:** Built a full-stack **product management and e-commerce platform** using **Laravel 5**, aligning functionality with business and sales objectives.
- Architecture & Optimisation:** Designed **MySQL databases**, improved performance by resolving technical issues, and implemented **custom middleware** for scalability.
- UI & Deployment:** Created responsive **Blade/Bootstrap** interfaces and deployed through **AWS EC2, Docker, and GitHub** in an **Agile/Scrum** environment.

FHL Group IT support

2016 – Jan 2018

Key Responsibilities:

- API Management & Integration:** Managed and optimised APIs for PHP-based eCommerce systems, ensuring reliable communication between company websites, carriers, and third-party platforms.
- Web Development & Feature Enhancement:** Developed new site features, including promotional templates and payment integrations, to improve customer engagement and conversion rates.
- SEO & Product Optimisation:** Created and maintained SEO-friendly product listings with dynamic metadata, enhancing visibility and search rankings across platforms.

Education

UNIVERSITY
OF TASMANIA

Bachelor of Computing (With Honours)

Feb 2011-Aug 2014

- Graduate Project:** Developed a Career Hub showcase website for future students using HTML, CSS, jQuery, and a Content Management System.

- **Honours Thesis:** *Using Hopfield Network to Understand Alzheimer's Disease* — applied **Artificial Intelligence**, **Neural Networks**, and **MATLAB** to model cognitive decline patterns.
- Academic Achievement:** Received 100% in two major assignments and tutorial work for *KXT309 Advanced Dynamic Web Development*, a full-stack project using LAMP and JavaScript/jQuery.
