

- **Full-stack e-commerce development:** Delivered a high-performance **Next.js + React (v19)** front end with a headless **Adobe Commerce (Magento) + MySQL** platform as part of MFG's **microservices** ecosystem.
- **Stakeholder communication:** Collaborated with non-technical stakeholders to clarify high-level business ideas, translate requirements into feasible technical solutions, and communicate technical trade-offs clearly.
- **Agile Delivery & Cross-Functional Collaboration:** Worked closely with designers, product owners, QA, and cloud engineers to deliver features iteratively within agile sprints. Managed tasks, bugs, and release cycles using Jira with a strong focus on value-driven delivery.
- **CI/CD pipeline optimisation:** Supported and improved GitHub Actions workflows for automated build, testing and deployment of Next.js / React applications, helping improve release reliability, reduce manual deployment effort and maintain consistent delivery across multiple eCommerce brands.
- **Third-party system integration:** Integrated external services and third-party APIs, including checkout, delivery, payment, product and marketing-related systems, into the headless eCommerce platform to support seamless customer and operational workflows.
- **AI-powered product recommendation plugin:** Built an AI-assisted shoe recommendation plugin that converted CMS content into vector embeddings, enabling semantic search and personalised shoe suggestions based on occasion, function and customer needs.
- **AI-Assisted Engineering Workflow:** Leverage AI tools (ChatGPT/Copilot/Claude) to refactor legacy modules, validate design decisions against industry best practices, generate test cases, and optimise implementation patterns—improving development velocity, code quality, and maintainability.
